

DVB-T/H DIGITAL TV TRANSMITTERS

MOT 2100 DVB-T/H

The **MOT 2100 DVB-T/H** transmitter provides a cost-effective solution to meet the most demanding requirements of today's Digital Terrestrial Television Broadcasting. It is made up of the **DVB-T/H modulator** and three **S 700 DVB-T** amplifiers. The amplification stages incorporate high linearity LDMOS transistors. An intermediate external driver is included in order to improve the efficiency of the final amplifying stage. Using the complete alarm and digitalized information systems of this transmitter, the user can control the most relevant parameters of the modulation (according to EN 300 744 standard) and of the amplifying stages. Digital telemetry output is included, and critical or non-critical mask filter can be supplied.
